## PUT YOUR SKIN IN THE HANDS OF A DERMATOLOGIST

*It seems that everyone is offering cosmetic services today—gynecologists, ophthalmologists...even chiropractors! Smart patients entrust their skin to dermatologists and their office staff, who have the knowledge, training and skills to provide these services with confidence.*

**BOTOX**—This is a wonderful procedure! Botox injections smooth the lines between your brows, on your forehead, next to your eyes, and even around your mouth by relaxing your muscles. The treatment takes under ten minutes, works within days, and lasts up to four months.

**Restylane**—Restylane injections add fullness to nasolabial folds, corners of the mouth and the lips. Hyaluronic acid found in Restylane is a substance naturally found in the body. The injections provide immediate results and last four to six months.

**Starlux Pulsed Light System: Hair Removal**—A series of treatments with a specialized handpiece is used for permanent hair reduction.

**Starlux Pulsed Light System: Photofacials**—This powerful series of treatments improves sun damage, removes brown spots, and treats blood vessels and redness on the face, including rosacea. This can also be used on the neck, chest and hands. Bonus—when used with Levulan Kerastick solution, precancerous keratoses can also be cleared.

**Chemical Peels: Medium Depth**—TCA (trichloroacetic acid) peeling is more aggressive. Our TCA peel is designed to treat sun-damaged skin, including brown spots, melasma, fine lines and rough skin. There is a recovery period but the results are much more dramatic. The peel can be repeated in eight weeks, although this is not necessary.

**Chemical Peels: Superficial**—Our salicylic acid peel lifts dull cells on the skin surface and stimulates skin renewal. Fine lines, texture and tone improve. Acne, oily skin and enlarged pores are improved. A series of two to four peels and a home skin regimen are recommended. There is no downtime!

**Microdermabrasion: Crystal-Free**—The DiamondTome Resurfacing System polishes away dead skin layers to expose healthier skin and promote new growth. It improves fine lines, texture, tone, melasma, acne, oily skin and scars. A series of four and a home skin care regimen are recommended. There is no downtime!

*Rejuvelux Photofacial Treatment: Before and After*

**Skin Care Products and Visia Analysis**—We dispense MDForte glycolic acid products, Skinceutical Vitamin C product, Afirm retinol creams, and more. We also have micronized zinc oxide sunblocks SPF30 and higher. We can make a digital image of your facial skin and measure spots, pores, wrinkles, evenness and sun damage. We can point areas of improvement and personalize a skin care regimen.

**Cosmetic Mole Removals**—These procedures can be performed in the office with no downtime.
